

"TerraIndex simply makes the work easier and improves quality"

ERM Nederland B.V.
Ruurd Peppel, Principal Consultant

ERM Nederland B.V. is a unit of Internationale ERM (Environmental Resources Management).

ERM Nederland B.V. consults with companies and developers in the area of soil, risk analysis and risk management, due diligence, and compliance audits for mergers and take-overs, second opinions, energy, HSEQ management, sustainability and integrated environmental management, environmental impact statements (EIS), and CO₂/NO_x emissions swaps.

ERM typically works at the strategic level, focusing its services on Fortune 500 companies and working with clients in petrochemicals and production. ERM's Netherlands location is in Delft.

"I.T. Works is a good club that knows its business"

ERM was one of the first of I.T. Works' clients to use TerraIndex three years ago. Ruurd Peppel had already used BoorManager with a previous employer and was looking for a solution that could be used internationally and especially from any worksite, including in the field from a laptop.

ERM has now deployed Terra Index throughout the entire process from fieldwork to reporting test results. ERM consultants are closely involved at all steps in the process, from soil surveys to the final reports to management at the strategic level, in all of which security takes a key role.

ERM's consultants often work from the site: access to TerraIndex at any time and place is a must. The TerraIndex total solution provides this, and ERM uses it throughout the organisation with complete satisfaction.
